

Presentation of the new function selector
with capacitive touchscreen display

FSD1

Innovate to simplify

High-tech expressed with style

The essential and elegant design of the function selector FSD1, goes to further make precious the entire automatic entrance, helping to communicate to all the people that pass through it, a message of modernity and dynamism that leads to valorize the environment in which are entering.

The device is equipped with a capacitive touchscreen display intuitive and easy, the LED backlight ensures high visibility settings in adverse lighting conditions.

The glass front panel, is pleasantly "clean" to view and adequately resistant for use in all conditions.

The simplified authorization to use, is activated through contactless badge via radio, without using "mechanical" key.

The device is designed to interact directly with NFC enabled smartphones.

The realization of interactive graphic design of the front panel, was assigned to Desall, young company growing in H-FARM. Desall is a crowdsourcing platform that, through design contests, connects companies with a worldwide community of creative talents.

The Desall/FACE contest winner is: Linus Lihuang Tan, from Melbourne Australia.
